FROM THE FOUNDER

Welcome to J-Cal, an AI-powered scheduling assistant built for adults with ADHD. I created J-Cal around a simple idea: planning your day shouldn't require more mental energy than doing it.

Over my years of trial and error, I've discovered that the right scheduling system can make a real difference. But for many people with ADHD, the hardest part isn't having a calendar—it's figuring out what to do, when to do it, and how everything fits together.

J-Cal is designed to make that process simpler. You brain dump what's on your mind, and J-Cal helps organize those thoughts into a realistic plan based on your priorities, deadlines, available time, and commitments.

As a thank-you for joining us early, I'm thrilled to offer you a FREE guide, "5 ADHD Scheduling Success Strategies." I hope these ideas help you reduce overwhelm and make your days feel more manageable.

A handwritten signature in black ink, appearing to read "Junko", is positioned at the bottom left of the page.

5 ADHD SCHEDULING SUCCESS RECIPES

JCAL SCHEDULING APP

- 1. BRAIN DUMP EVERYTHING.**
- 2. DECIDE WHAT MATTERS NOW.**
- 3. GIVE YOUR TASKS A HOME.**
- 4. LEAVE ROOM FOR REAL LIFE.**
- 5. RESET, DON'T RESTART.**

BRAIN DUMP EVERYTHING

BRAIN DUMP EVERYTHING

Start with everything, not a perfect list

When ADHD makes your thoughts feel like they're competing for attention, organizing them can become a task in itself. A brain dump removes that first hurdle: get the appointments, errands, deadlines, ideas, calls, chores, and reminders out of your head.

Don't worry about putting things in order. Don't decide what is urgent. Don't estimate every task. Just capture what is on your mind in plain language.

Try this: spend two minutes writing or saying everything you don't want to forget. Then look for the few items that truly need your attention today.

J-Cal is built around this same idea: you brain dump first; the app helps organize the rest.

**Finally, a plan
that fits *your*
mind.**

Turn mental clutter into a clear,
realistic day — in seconds.

DECIDE WHAT MATTERS NOW.

DECIDE WHAT MATTERS NOW.

When everything feels important, choosing what to do first can be exhausting. You don't need to solve your entire life today. Start by identifying what truly needs your attention now.

Separate your list into three simple levels:

- Must Do: deadlines, appointments, or tasks with real consequences if they wait.
- Should Do: important work that can move forward today but has some flexibility.
- Can Wait: useful tasks that don't need today's energy.

If a task doesn't have to happen today, let it wait. Giving yourself permission to postpone something intentionally is very different from forgetting it.

J-Cal uses the same principle when it organizes a brain dump: it looks at urgency, deadlines, and available time to help you focus on what matters most instead of trying to do everything at once.

GIVE YOUR TASKS A HOME

JCAL SCHEDULING APP

Brain dump

Anything on your mind? Get it out.

e.g. Finish slides for meeting, laundry,
schedule haircut, call mom...

No limit — dump everything

NEED A PROMPT?

Errands to run

Work deadlines

Appointments

Things I've been avoiding

GIVE YOUR TASKS A HOME

A task on a list can feel vague. A task with a time and place feels much more concrete.

Instead of writing "work on presentation," give it a realistic block such as "6:30–7:15 PM — presentation." You don't need to schedule every minute. The goal is simply to give important tasks a reasonable home in your day.

Keep your estimates realistic. If something usually takes 30 minutes, don't pretend you'll finish it in 10 just to make the schedule look better. And don't fill every open minute. A schedule with breathing room is easier to recover when life changes.

If you connect your calendar, J-Cal can work around existing appointments and available time when creating your suggested schedule.

Think of your schedule as a guide—not a test you have to pass.

LEAVE ROOM FOR REAL LIFE

JCAL SCHEDULING APP

LEAVE ROOM FOR REAL LIFE

Even the best plan can get interrupted. A meeting runs late. You forget an errand. You get tired. Something unexpected comes up. That doesn't mean your day failed.

For ADHD, an overpacked schedule can make one missed task feel like the whole plan is ruined. Build in some breathing room so your schedule has somewhere to bend.

Try a buffer: if you have an appointment at 3:00, don't automatically plan a demanding task right up against it. Give yourself transition time. Leave a little space between blocks whenever you can.

And when something doesn't get done, reschedule it instead of carrying guilt about it. J-Cal's adaptive scheduling concept is built around this idea: when plans change, your schedule can change too.

A realistic schedule isn't one that never changes. It's one you can recover from.

RESET, DON'T RESTART

JCAL SCHEDULING APP

RESET, DON'T RESTART

At the end of the day, take a quick look back. What got done? What moved? What never happened? You aren't grading yourself—you're learning how your day actually works.

If a task was postponed, ask why. Was the estimate too short? Did something unexpected happen? Was the task too big or unclear? Did you simply run out of energy?

Use the answer to make tomorrow easier. Break a large task into a smaller first step. Give yourself more time. Move something that can wait. Remove something that doesn't matter anymore.

Most importantly, don't confuse an imperfect day with a failed system. Reset and keep going. Consistency doesn't mean following the plan perfectly; it means returning to the plan when you get off track.

That's the mindset behind J-Cal too: your schedule should adapt to real life—not make you feel like you've failed when real life happens.

Plan Less. Get More Done.
